

A

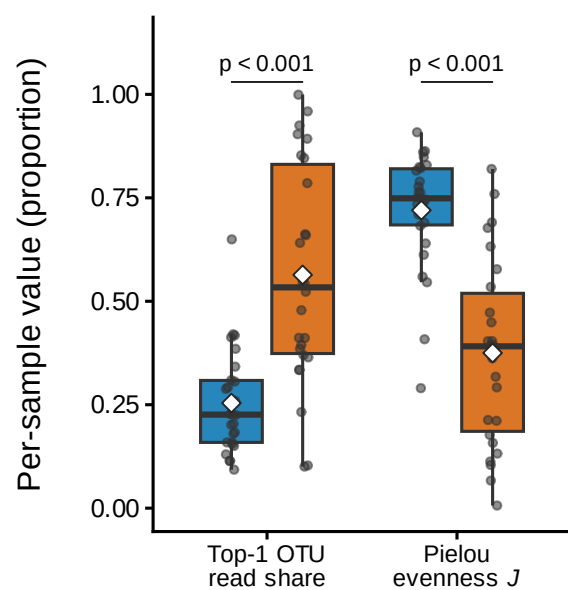

Pooled-season diversity at equal depth (12,615 reads/sample) and equal coverage (0.65); iNEXT3D, incidence, median over 50 rarefaction draws; bars are 95% CIs. Summer exceeds winter at every order.

**B**

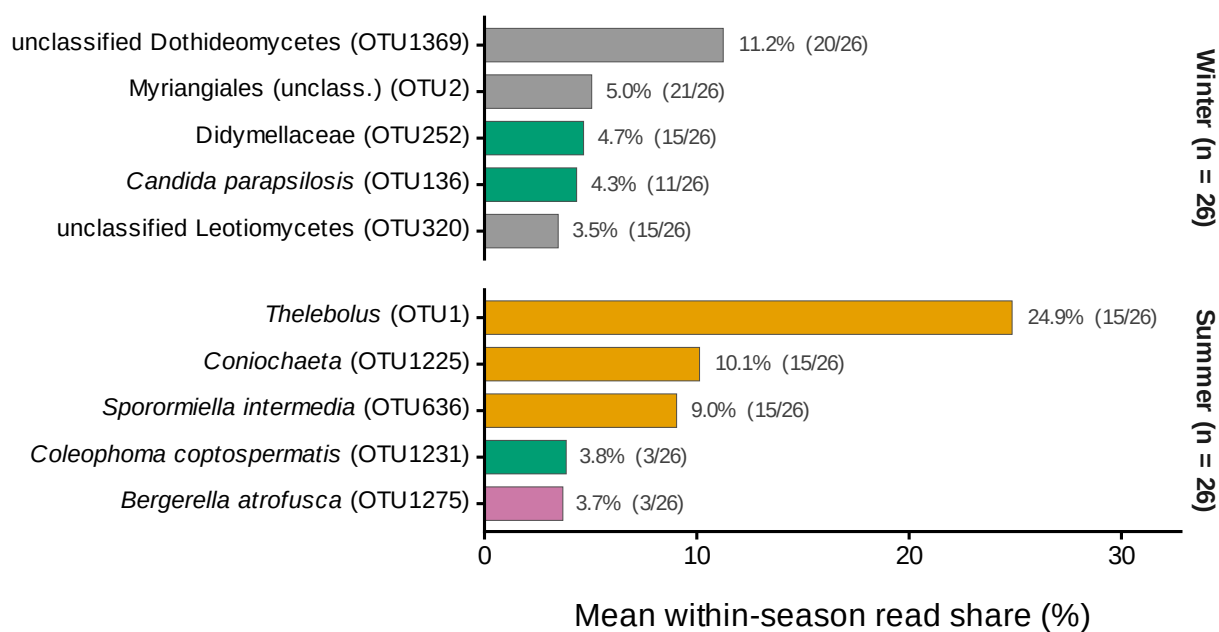

Per-sample Hill numbers ($n = 52$, iNEXT3D size-standardised to 12,615 reads); white diamonds are season means. Annotations: year-adjusted summer/winter ratio, gamma GLM on these values (Table S9).

**C**

White diamonds are season means; brackets give the Wilcoxon rank-sum test (Table S10).

**D**

Bar labels give the mean share and, in parentheses, the number of that season's samples with any detection.
