

A

The 22 OTUs holding  $\geq 1\%$  of modelled read share each (73% of modelled reads).  
Abundance (CLR) model; 9 of 22 resolved at 0.95 posterior support.

B

Abundance (CLR) model; all 226 OTUs, then by guild.  
Right-hand figures give Season + Year combined.

**All modelled OTUs**  
(n = 226)

**Dung saprotroph**  
(n = 14)

**Unassigned / dark**  
(n = 79)

**Plant-associated**  
(n = 50)

**Pathotroph**  
(n = 16)

**Other assigned**  
(n = 67)

0% 25% 50% 75% 100%

Mean share of per-OTU variance

Guild ● Dung saprotroph ● Plant-associated ● Pathotroph ● Other assigned ● Unassigned / dark

● Posterior support  $\geq 0.95$  ○ Not resolved
